Project Title: AI-Powered Gmail Phishing Detection Extension
Author: Shaheer Ahmed
Date of Original Concept: August 1, 2025

📌 Description:
This document certifies that the concept, design, and implementation plan for a Chrome Extension that scans Gmail emails for phishing content in real time, issues warnings, and links to a web-based AI explanation system, was originally developed and proposed by **Shaheer Ahmed**.

This includes:
- Real-time email content & link scanning in Gmail
- Threat detection using third-party APIs (e.g. VirusTotal, PhishTank)
- Browser-based warning system
- Integration with an AI explanation chatbot via "Learn More"
- Optional dashboard with scan history

No code, repository, or IP ownership has been assigned or transferred to any third party or organization, including XAI or any of its affiliates.

⚠️ License Statement:
This work is not authorized for commercial use, reproduction, modification, or distribution without **explicit written permission** from the author. Any unauthorized attempt to use or represent this project will be considered an infringement of IP rights.
